Denmark could improve the delivery on the Consultation and Transparency of Development Aid Programmes by:

• The MFA should improve its publication to IATI so it is comprehensive, uses all fields and includes an organisation file. It should also update its implementation schedule accordingly. It should start publishing monthly to IATI and should segment its IATI data into one file per country or region.

• It should make information included in the PPO database available in machine-readable format.

• Denmark should update its OGP National Action Plan to include more stretching commitments to implement IATI fully.
