

## Foreword

In ensuring focus on the objectives of our medium-term Plateau State Development Strategy (PSDS), 2019-2023, I established the Programme Management and Results Delivery Office (PMRDO) through Executive Order 1 of November, 2019 with the mandate to design and implement a Planning, Learning and Control System for the Coordination, Monitoring and Evaluation of the implementation of the initiatives in the PSDS. Recently, Plateau State established the framework of collaboration with the United Nations Development Programme (UNDP) for the formulation of a 30-year long-term Development Plan for the State, tagged "Plateau State Agenda 2050." The framework has a requirement for sustainability in the implementation of the Plateau State Agenda 2050; thus, reinforcing the need for a Results-Based Monitoring and Evaluation practice across all sectors and levels of governance in the State.

I am persuaded that a Results-Based M&E approach will engender visible impacts of government policies, programmes and projects culminating into sustainable development, economic growth and social well-being of the people of Plateau State. The effective institutionalization of the Results-based M&E practice across the State calls for the deployment of a clear policy and legal framework for guidance and action. The Plateau State M&E Policy will facilitate the effective achievement of the objectives behind most of our recent legislations that were put in place to open up the business and development space in our state, such as: Plateau State Public Private Partnership Law, 2018; Plateau State Bureau of Public Procurement Law, 2018; and Plateau State Statistics System Law, 2017 amongst others. These are aimed at improving the business enabling environment for investors and also strengthening the confidence of our local and international development partners for enhanced donor-support.

The Policy provides a clear framework for the institutionalization of monitoring and evaluation in the State public sector as well as guidelines for co-ordination, administration and general management to those responsible for implementing government policies, programmes and projects. This approach is one of the ways through which government provides accountability to its citizenry, in adherence to the cardinal principles of the global Open Government Partnership (OGP) of which Plateau State is a member.

Furthermore, the Policy will improve the performance of the public sector through strengthened operations, robust data mining, cost efficiency and impact-focused implementation of development strategies and plans of the State.

I, therefore, urge all stakeholders to fully support the implementation of this Policy in all sectors and at all levels for the early realization of our development objectives for the desired impacts on the people of Plateau State.

**Rt. Hon. Simon Bako Lalong**  
Executive Governor, Plateau State

## Foreword

In ensuring focus on the objectives of our medium-term Plateau State Development Strategy (PSDS), 2019-2023, I established the Programme Management and Results Delivery Office (PMRDO) through Executive Order 1 of November, 2019 with the mandate to design and implement a Planning, Learning and Control System for the Coordination, Monitoring and Evaluation of the implementation of the initiatives in the PSDS. Recently, Plateau State established the framework of collaboration with the United Nations Development Programme (UNDP) for the formulation of a 30-year long-term Development Plan for the State, tagged "Plateau State Agenda 2050." The framework has a requirement for sustainability in the implementation of the Plateau State Agenda 2050; thus, reinforcing the need for a Results-Based Monitoring and Evaluation practice across all sectors and levels of governance in the State.

I am persuaded that a Results-Based M&E approach will engender visible impacts of government policies, programmes and projects culminating into sustainable development, economic growth and social well-being of the people of Plateau State. The effective institutionalization of the Results-based M&E practice across the State calls for the deployment of a clear policy and legal framework for guidance and action. The Plateau State M&E Policy will facilitate the effective achievement of the objectives behind most of our recent legislations that were put in place to open up the business and development space in our state, such as: Plateau State Public Private Partnership Law, 2018; Plateau State Bureau of Public Procurement Law, 2018; and Plateau State Statistics System Law, 2017 amongst others. These are aimed at improving the business enabling environment for investors and also strengthening the confidence of our local and international development partners for enhanced donor-support.

The Policy provides a clear framework for the institutionalization of monitoring and evaluation in the State public sector as well as guidelines for co-ordination, administration and general management to those responsible for implementing government policies, programmes and projects. This approach is one of the ways through which government provides accountability to its citizenry, in adherence to the cardinal principles of the global Open Government Partnership (OGP) of which Plateau State is a member.

Furthermore, the Policy will improve the performance of the public sector through strengthened operations, robust data mining, cost efficiency and impact-focused implementation of development strategies and plans of the State.

I, therefore, urge all stakeholders to fully support the implementation of this Policy in all sectors and at all levels for the early realization of our development objectives for the desired impacts on the people of Plateau State.
